

State: ANDHRA PRADESH

Agriculture Contingency Plan for District: SPSR NELLORE

1.0 District Agriculture profile					
1.1	Agro-Climatic/Ecological Zone				
	Agro Ecological Sub Region (ICAR)		Deccan Plateau, hot arid eco region (7.3, 18.3)		
	Agro-Climatic Region (Planning Commission)		Southern Plateau and Hills Region (X)		
	Agro Climatic Zone (NARP)		Southern Zone (AP-3)		
	List all the districts or part thereof falling under the NARP Zone		Nellore, Chittoor, Dr. Y.S.R Kadapa Districts		
	Geographic coordinates of district		Latitude	Longitude	Altitude
			13°25' and 15° 55' N	79°9' and 80°14' E	
	Name and address of the concerned ZRS/ ZARS/ RARS/ RRS/ RRTTS		Regional Agricultural Research Station, Tirupati, Chittoor District.		
	Mention the KVK located in the district		Krishi Vigyan Kendra, Nellore-524003		
1.2	Rainfall	Normal RF(mm)	Normal Rainy days (no)	Normal Onset	Normal Cessation
	SW monsoon (June-Sep):	337	16	1 st week of June	2 nd week of October
	NE Monsoon(Oct-Dec):	665	21	1 st week of October	4 th week of December
	Winter (Jan- Feb)	30	0		--
	Summer (Mar-May)	64.0	1	--	--
	Annual	1095.0	38	--	--

1.3	Land use pattern of the district (latest statistics)	Geographical Area	Forest area	Land under non-agricultural use	Permanent pastures	Cultivable wasteland	Land under Misc. tree crops and groves	Barren and uncultivable land	Current fallows	Other fallows
	Area ('000 ha)	1307.6	262.8	251.9	73.1	111.4	18.9	138.2	45.0	61.5

1.4	Major Soils (common names like shallow red soils etc.,)	Area ('000 ha)	Percent (%) of total
	Red Soils	536.1	41
	Coastal Sandy Soils	444.6	34
	Black Cotton Soils	196.1	15
	Alluvial Soils	65.4	5
	Laterite soils	65.4	5
1.5	Agricultural land use	Area ('000 ha)	Cropping intensity %
	Net sown area	330.5	123.0
	Area sown more than once	76.1	
	Gross cropped area	406.6	

1.6	Irrigation	Area ('000 ha)		
	Net irrigated area	237.4		
	Gross irrigated area	306.5		
	Rainfed area	93.1		
	Sources of Irrigation	Number	Area ('000 ha)	Percentage of total irrigated area

Canals Major projects/reservoirs Medium irrigation projects Streams	332	87.7	35.9
Tanks	1763	73.8	30.2
Open wells	31,479	14.9	5
Bore wells	47,898	73.8	30.2
Lift irrigation schemes	3,212	11.1	--
Micro-irrigation		--	--
Other sources		11.1	3
Total Irrigated Area		326.4	--
Pump sets			
No. of Tractors			
Groundwater availability and use* (Data source: State/Central Ground water Department /Board)	No. of blocks/ Tehsils/Mandals	(%) area	
Over exploited	-	-	
Critical	-	-	
Semi- critical	6	13	
Safe	40	87	
Net water availability and use	264391 ha.m		
Ground water quality	In general suitable for irrigation		

*over-exploited: ground water utilization > 100%; critical: 90-100%; semi-critical: 70-90%; safe: <70%

Area under major field crops and Horticulture, etc., (2008-2009)

(Source: APHU)

1.7	Major Field Crops cultivated	Area ('000 ha)					
		<i>Kharif</i>		<i>Rabi</i>		Summer	Total
		<i>Irrigated</i>	<i>Rainfed</i>	<i>Irrigated</i>	<i>Rainfed</i>		
	Paddy	64.6	--	191.5	--	--	256.1
	Blackgram	0.3	--	--	20.5	--	20.8
	Sugarcane	7.8	--	6.3	--	--	14.1
	Groundnut	7.1	--	5.5	--	--	12.6
	Bengalgram	--	--	--	10.5	--	10.5
	Sunflower	3.8	--	--	5.2	--	9.05
	Tobacco	6.1	--	0.8	--	--	7.0
	Cotton	5.6	--	0.8	--	--	6.4
	Sesamum	1.6	--	--	0.6	--	2.2
	Greengram	0.08	--	--	2.08	--	2.1
	Chilli	0.049	--	1.5	--	--	1.6
	Redgram	0.7	--	--	0.3	--	1.04
	Maize	--	--	--	--	--	--
	Horticulture crops - Fruits	Total area					
	Lemon	25.6					
	Mango	10.5					
	Orange&batavina	5.09					
	Cashew	1.1					
	Banana	1.1					
	Horticultural crops - Vegetables	Total area					
	Chillies	1.6					

	Bhendi	0.8		
	Brinjal	0.4		
	greens	0.4		
	Horticultural crops - Flowers	Total area		
	Marigold	0.2		
	Plantation and Spice crops	Total area		
	Oil palm	3.4		
	Coconut	0.9		
	Betelvine	0.5		

1.8	Livestock	Male(number)	Female (number)	Total (number)
	Non descriptive Cattle (local low yielding)	73,346	84485	1,57,831
	Crossbred cattle	1,794	11,296	13,090
	Non descriptive Buffaloes (local low yielding)	1,05,339	6,64,105	7,69,444
	Graded Buffaloes			
	Goat			3,65,685
	Sheep			3,65,685
	Others (Camel, Pig, Yak etc.)			12.18
	Commercial dairy farms (Number)			
1.9	Poultry	No. of farms	Total No. of birds (number)	
	Commercial		1084763	
	Backyard		1682956	

1.10	Fisheries (Data source: Chief Planning Officer)						
	A. Capture						
	i) Marine (Data Source: Fisheries Department)	No. of fishermen	Boats		Nets		Storage facilities (Ice plants etc.)
			Mechanized	Non-mechanized	Mechanized (Trawl nets, Gill nets)	Non-mechanized (Shore Seines, Stake & trap nets)	
		14664	21	2466 / 2677	6 / 54102	0 / 10704	30 / 6
ii) Inland (Data Source: Fisheries Department)	No. Farmer owned ponds		No. of Reservoirs		No. of village tanks		
	1553		4		417		
B. Culture							
		Water Spread Area (ha)		Yield (t/ha)		Production ('000 tons)	
	i) Brackish water (Data Source: MPEDA/ Fisheries Department)	3677		0.002		8.530	
	ii) Fresh water (Data Source: Fisheries Department)	2221		0.011		24.586	
	Others			0.000		84.150	

1.11	Production and Productivity of major crops	Kharif		Rabi		Summer		Total	
		Production ('000 t)	Productivity (kg/ha)						

1	Paddy	238.1	3684	719.5	3756	--	--	957.5	3738
2	Groundnut	16.3	2280	12.7	2310	--	--	29.0	2293
3	Blackgram	0.2	580	12.5	610	--	--	12.7	609
4	Sugarcane	781.3	99850	603.9	96580	--	--	1385.2	98215
5	Sunflower	3.6	940	5.1	980	--	--	8.7	960
Major Horticultural crops (Crops to be identified based on total acreage)									
	Horticulture crops - Fruits								
1	Lemon							375.1	14667
2	Mango							86.7	8267
3	Orange & batavian							67.7	133
4	Cashew							0.7	627
5	Banana							33.0	29998
	Horticultural crops - Vegetables								
1	Chillies							4.6	2750
	Plantation and Spice crops								
1	Oil palm							15791	4667

1.12	Sowing window for 5 major field crops (start and end of normal sowing period)	Paddy	Blackgram	Groundnut	Sugarcane	Sunflower
	Early Kharif	April - May	--	--	--	--
	Kharif	August - September	--	May - June	--	June
	Rabi	October - November	October	December – January 1 st FN	December - February	November – December

1.13	What is the major contingency the district is prone to? (Tick mark and mention years if known during the last 10 year period)	Regular	Occasional	None
	Drought			
	Flood			
	Cyclone			
	Hail storm			
	Heat wave			
	Cold wave			
	Frost			
	Sea water intrusion			
	Snow fall			
	Land slides			
	Earth quake			
	Pests and diseases outbreak (specify) Rice	Blast (Rabi) Mite (Early Kharif) Sheath blight (Kharif /Rabi) Leaf folder(Kharif /Rabi) Stem bore (Kharif /Rabi)) Bacterial leaf blight (Rabi)	Stem rot Gall midge Brown Plant Hopper	
	Blackgram	Leaf spots Maruka pod borer Spodoptera	Yellow mosaic virus Powdery mildew	--

	Groundnut	Collar/crown rot Spodoptera Sclerotium stem rot	Leaf miner Bud necrosis Tikka leaf spot	--
	Sugarcane	Early shoot borer Inter nodal borer	Whip smut Red rot	--
	Sunflower	Helicoverpa	Bud necrosis	--
	Others	--	--	--

1.14	Include Digital maps of the district for	Location map of district within State as Annexure I	Enclosed: yes
		Mean annual rainfall as Annexure 2	Enclosed: yes
		Soil map as Annexure 3	Enclosed: yes

**MANDAL WISE - NORMAL RAINFALL (mm)
NELLORE DISTRICT**

2.0 Strategies for weather related contingencies

2.1 Drought

2.1.1 Rainfed situation

Condition			Suggested Contingency measures		
Early season drought (delayed onset)	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Delay by 2 weeks (October 3rd wk)*	Black soils – Rainfed	Blackgram	No change	Prefer varieties, LBG-645, LBG-648, LBG-20, LBG-623, LBG-752, PBG-1, PBG-107.	-
		Tobacco		Prefer varieties: G-11, ITC varieties.	
	Red soils - Rainfed	Blackgram		Prefer varieties: LBG- 645, LBG-623, T-9, PBG-1.	
		Greengram,		Prefer varieties : LGG-407, LGG-410, LGG-450, LGG-460, ML-267.	
Condition			Suggested Contingency measures		
Early season drought (delayed onset)	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Delay by 4 weeks (November 1st wk)	Black soils – Rainfed	Blackgram	No change	Prefer early maturing blackgram varieties: LBG-623, LBG-20, LBG-752.	

	Red soils - Rainfed	Greengram		Prefer varieties : LGG-407, LGG-410, LGG-450, LGG-460, ML-267. Adopt recommended practices	
Condition			Suggested Contingency measures		
Early season drought (delayed onset)	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Delay by 6 weeks (November 3rd wk)	Black soils – Rainfed	Bengal gram	No change	Measures similar to 4 weeks delay	
	Red soils - Rainfed	Greengram			

Condition			Suggested Contingency measures		
Early season drought (delayed onset)	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Delay by 8 weeks (December 1 st wk)	Black soils – Rainfed	Bengal gram	No change	As above in delay by 4 weeks	
	Red soils - Rainfed	Greengram		Prefer greengram varieties: LGG-407, LGG-410, LGG-460, ML-267. Adopt recommended practices.	

Condition			Suggested Contingency measures		
Early season drought (Normal onset)	Major Farming situation	Normal Crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation
Normal onset followed by 15-20 days dry spell	Black soils – Rainfed	Blackgram	Plant protection against flea beetles, thrips and white fly (YMV)	spray 0.5% KNO ₃ . Spray 2% urea Adopt recommended practices.	

after sowing leading to poor germination/crop stand etc.	Red soils - Rainfed	Blackgram	Plant protection against flea beetles, thrips and white fly (YMV)	spray 0.5% KNO ₃ . Spray 2% urea	
		Greengram			
Condition			Suggested Contingency measures		
Mid season drought (long dry spell, consecutive 2 weeks /more	Major Farming situation	Normal Crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation
At vegetative stage	Black soils – Rainfed	Blackgram	Plant protection against thrips and whitefly/YMV	spray 0.5% KNO ₃ . Spray 2% urea	
		Tobacco	Plant protection against white fly	Spray 2% urea	
	Red soils - Rainfed	Blackgram	Plant protection against thrips and whitefly/YMV	spray 0.5% KNO ₃ . Spray 2% urea Adopt recommended practices.	
		Greengram			
Condition			Suggested Contingency measures		
Mid season drought (long dry spell)	Major Farming situation	Normal Crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation
At reproductive stage	Black soils – Rainfed	Blackgram	Plant protection against thrips and white fly/YMV, Maruca pod borer and Tobacco caterpillar	spray 0.5% KNO ₃ . Spray 2% urea Adopt recommended practices.	--
	Red soils - Rainfed	Blackgram	Plant protection against thrips and white fly/YMV, Maruca pod borer and Tobacco caterpillar	spray 0.5% KNO ₃ . Spray 2% urea Adopt recommended practices.	--
		Greengram			--
Condition			Suggested Contingency measures		
Terminal drought	Major Farming situation	Normal Crop/cropping system	Crop management	Rabi Crop planning	Remarks on Implementation

	Black soils – Rainfed	Blackgram	Harvest at physiological maturity		
		Bengalgram			
		Tobacco	Harvest matured leaves		
	Red soils - Rainfed	Blackgram	Harvest at physiological maturity		
Greengram					

2.1.2 Irrigated situation

Condition	Major Farming situation	Normal Crop/cropping system	Suggested Contingency measures		
			Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Delayed release/receipt of water in canals/tanks due to low rainfall	Irrigated wet lands – supplemented with bore wells, filter points and canals under sandy clay loams and deltaic alluvials, costal lands	Early Kharif Paddy	No change (under bore wells/filter points.)	Prefer short duration varieties : Bharani, Somasila, MTU-1010, NLR-34242, NLR-34449, JGL-1798.	
		Kharif Paddy	No change	Prefer long/mid duration varieties: NLR-9674, NLR-33892, NLR-28523, BPT-5204, CR-1009.	
		Rabi Paddy		Prefer medium/short duration varieties: Swathi, Deepti, BPT-5204, JGL-	

Condition	Suggested Contingency measures			Remarks on Implementation
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	
				<p>384, NLR-34449, NDLR-7, 8, Vijetha, ADT-37, Swarna mukhi, Sravani, Somasila, NLR-33636, NLR-33671, MTU-1010.</p> <p>Prefer green manure crop after harvest of Early Kharif Rice.</p> <p>Adopt recommended practices.</p>
		Sugarcane		<p>Prefer early/mid late maturing varieties: 85 A 261, 87 A 298, 83 V 15.</p> <p>Adopt recommended practices.</p>

Condition	Suggested Contingency measures				
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Irrigated uplands under wells and bore wells – Red loams, sandy clay loams	Rabi Paddy	No change	Prefer medium/short duration varieties: Swarna Mukhi, Swathi, Deepthi, BPT-5204, JGL-384, MTU-1010, Vijetha, Sravani, Apoorva, ADT-37, NLR-34449. Grow green manure crop before Rabi rice. Adopt SRI cultivation.		
	Groundnut		Prefer varieties: TPT-4, Narayani, Kalahasthi, K-6, Vemana, K-4, TAG-24, Abhaya, Greeshma. Adopt recommended practices		
	Sesamum		Prefer Varieties : Gowri, Madhavi, YLM-11,17. Adopt recommended practices		

Condition	Suggested Contingency measures				
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
		Cotton	No change	Prefer NHH-44, H-8, Ajith-11, BT cottons. Adopt recommended practices	
		Sunflower		Prefer hybrids Adopt recommended practices.	
	Irrigated wet lands Under Tanks - Red loams, Sandy clay loams, coastal sands	Rabi Paddy		Prefer medium/short duration varieties: Swarna Mukhi, Swathi, Deepthi, BPT-5204, JGL-384, MTU-1010, Vijetha, Sravani, Apoorva, ADT-37, NLR-34449. Semi- dry Rice Direct sowing Recommended chemical weed control. Adopt recommended practices.	

Condition	Suggested Contingency measures				Remarks on Implementation
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	
Limited release/receipt of water in canals/tanks due to low rainfall	Irrigated wet lands – supplemented with bore wells, filter points and canals under sandy clay loams and deltaic alluvials, costal lands	Early Kharif Paddy	No change (under bore wells/filter points.) Replace rice crop with Maize, summer pulses, etc., under canals.	Prefer short duration varieties : Bharani, Somasila, MTU-1010, NLR-34242, NLR-34449, JGL-1798. SRI cultivation. Adopt recommended practices.	
		Rabi Paddy	No change	Prefer short duration varieties: NLR-34449, Vijetha, ADT-37, MTU-1010. SRI cultivation Adopt recommended practices	
	Irrigated uplands under wells and bore wells – Red looms, sandy clay loams	Rabi Paddy		Prefer short duration varieties: NLR-34449, Vijetha, ADT-37, MTU-1010. Adopt SRI cultivation.	

Condition	Suggested Contingency measures				
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
		Groundnut	No change	Prefer varieties: TPT-4, Narayani, Kalahasthi, K-6, Vemana, K-4, TAG-24, Abhaya, Greeshma. Adopt recommended practices	
		Sunflower		Prefer hybrids Adopt recommended practices.	
		Sesamum		Prefer Varieties : Gowri, Madhavi, YLM-11,17. Adopt recommended practices	
		Cotton		Prefer NHH-44, H-8, Ajith-11, BT cottons. Adopt recommended practices	

Condition	Suggested Contingency measures				
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
	Irrigated wet lands Under Tanks - Red loams, Sandy clay loams, coastal sands	Rabi Paddy	No change	<p>Prefer short duration varieties: NLR-34449, Vijetha, ADT-37, MTU-1010.</p> <p>Adopt SRI cultivation.</p> <p>Direct sowing with chemical weed control.</p> <p>Aerobic rice</p> <p>Adopt recommended practices.</p>	

Condition	Suggested Contingency measures				
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Non release /receipt of water in canals/tanks under delayed onset of monsoon in catchment			NA		
Condition			Suggested Contingency measures		

	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Lack of inflows into tanks due to insufficient /delayed onset of monsoon			NA		
Insufficient groundwater recharge due to low rainfall			NA		

2.2 Unusual rains (untimely, unseasonal *etc*) (for both rainfed and irrigated situations)

Condition - Continuous high rainfall in a short span leading to water logging				
Crop	Suggested contingency measure			
	Vegetative stage	Flowering stage	Crop maturity stage	Post harvest
Rice	<ol style="list-style-type: none"> 1. Drain out excess water 2. Apply booster dose of 20-25 kg urea + 15 kg MOP /acre.to hasten the establishment and promote more tillering 3. Survived hills are to be split into individual tillers and used for gap filling. 4. Take up plant protection measures against leaf folder, stem borer , cut worm, sheath blight and stem rot. 	<ol style="list-style-type: none"> 1. Drain out excess water 2. Take up plant protection measures against leaf folder, cut worm, BPH, sheath blight , neck blast and stem rot. 	<ol style="list-style-type: none"> 1. Drain out excess water 2. Harvest at physiological maturity. 	<ol style="list-style-type: none"> 1. Drain out water and spread sheaves loosely in field or field bunds where there is no water stagnation 2. Spray common salt at 5% on sheaves to prevent germination and spoilage of straw from moulds 3. Thresh after drying the sheaves properly
Blackgram	<ol style="list-style-type: none"> 1. Drain out water 2. Spray 2% urea. 3. Spray fungicides like Copper oxy chloride 3 g or Carbendazim 1g or 	<ol style="list-style-type: none"> 1. Drain out water 2. Spray 2% urea. 3. Spray fungicides like Copper oxy chloride 3 g or Carbendazim 1g or 	<ol style="list-style-type: none"> 1. Drain out water 2. Allow the crop to dry completely before harvesting 3. Protect crop from moulds. 	<ol style="list-style-type: none"> 1. Spread the bundles on field bunds or drying floors to quicken the drying 2. Thresh the bundles after they are dried properly

	Mancozeb 2.5g/ lit of water. 4. Take up plant protection measures against <i>Spodoptera</i> etc.	Mancozeb 2.5g/ lit of water. 4. Take up plant protection measures against <i>Spodoptera</i> etc.		
Groundnut	1. Drain out water 2. Take up plant protection measures against <i>Spodoptera</i> etc.	1. Drain out water 2. Take up plant protection measures against <i>Spodoptera</i> etc.	1. Drain out water 2. Take up plant protection measures against <i>Spodoptera</i> and Tikka leaf spot.	1. Shifting of produce to safer place 2. Stripping of pods immediately after harvest of groundnut crop
Sugarcane	1. Drain out water	1. Drain out water	1. Drain out water	1. Transport immediately after harvest to factory
Sunflower	1. Drain out water	1. Drain out water 2. Protect crop from Helicoverpa and Spodoptera.	1. Drain out water 2. Protect crop from Helicoverpa and Spodoptera. 3. Protect from parrots	1. Shifting of produce to safer place
Horticulture				
Lemon	<ul style="list-style-type: none"> • Drain the excess water as soon as possible. • Spray 1% KNO₃ or Urea 2% solution 2-3 times. • Foliar spray of micronutrient mixture is also to be taken up. • Sand casting around the tree trunks should be removed up to the collar region of the tree to prevent fungal infections. • If the tree age is above eight years a booster dose of 500 g of Urea and 750 g MOP per tree should be applied. 	<ul style="list-style-type: none"> • Drain the excess water as soon as possible. • Spray 1% KNO₃ or Urea 2% solution 2-3 times. • Foliar spray of micronutrient mixture is also to be taken up. • Sand casting around the tree trunks should be removed up to the collar region of the tree to prevent fungal infections. • If the tree age is above eight years a booster dose of 500 g of Urea and 750 g MOP per tree should be applied. • Plant protection measures may be taken for control of insect vectors and diseases. 	<ul style="list-style-type: none"> • Drain the excess water as soon as possible. • Harvest the mature fruits in a clear sunny day. 	<ul style="list-style-type: none"> • Store the fruits in well ventilated place temporarily before it can be marketed. • Market the fruits as soon as possible.

Mango	<ul style="list-style-type: none"> • Drain the excess water as soon as possible • Spray 1% KNO₃ or Urea 2% solution 2-3 times. 	<ul style="list-style-type: none"> • Drain the excess water as soon as possible • Spray 1% KNO₃ or Urea 2% solution 2-3 times. 	Same as above	Same as above
Orange & Batavian	<ul style="list-style-type: none"> • Drain the excess water as soon as possible. • Spray 1% KNO₃ or Urea 2% solution 2-3 times. • Foliar spray of micronutrient mixture is also to be taken up. • Sand casting around the tree trunks should be removed up to the collar region of the tree to prevent fungal infections. • If the tree age is above eight years a booster dose of 500 g of Urea and 750 g MOP per tree should be applied. • 	<ul style="list-style-type: none"> • Drain the excess water as soon as possible. • Spray 1% KNO₃ or Urea 2% solution 2-3 times. • Foliar spray of micronutrient mixture is also to be taken up. • Sand casting around the tree trunks should be removed up to the collar region of the tree to prevent fungal infections. • If the tree age is above eight years a booster dose of 500 g of Urea and 750 g MOP per tree should be applied. 			soil mound and support	
--	--	--	------------------------	--

**2.5 Livestock, Poultry
General contingency plans**

Before the event	During the event	After the event
Feed and fodder availability		
<ul style="list-style-type: none"> 1. Conserving fodder/crop residues/ forest grass by silage / hay making either by individual or on community basis 2. Preparing complete diets and storing in strategic locations 3. Organize procurement of dry fodders / feed ingredients from surplus areas 4. Establish fodder banks and feed banks 5. Livestock relief camps during floods/cyclones must be planned in the vicinity of relief camps for people 6. Capacity building and preparedness 	<ul style="list-style-type: none"> 1. Organise relief camps 2. Supply silage / hay to farmers with productive stock on subsidized rates 3. Segregate old, weak and unproductive stock and send for slaughter 4. Supply mineral mixture to avoid deficiencies 5. Dry fodder must be offered to the livestock in little quantities for number of times 6. Concentrate feed or complete feed must be offered to only productive and young stock only 	<ul style="list-style-type: none"> 1. Capacity building to stakeholders on drought /cyclone/flood mitigation in livestock sector 2. Promote fodder cultivation. 3. Flushing the stock to recoup 4. Avoid soaked and mould infected feeds / fodders to livestock 5. Replenish the feed and fodder banks 6. Promote fodder preservation techniques like silage / hay making
Drinking water		

<p>1. Construct drinking water tanks in herding places, village junctions and in relief camp locations</p> <p>2. Plan for sufficient number of tanks for water transportation</p> <p>3. Identify bore wells, which can sustain demand.</p> <p>4. Procure sufficient quantities of water Sanitizers</p>	<p>1. Regular supply of clean drinking water to all tanks</p> <p>2. Cleaning the tanks in regular intervals</p> <p>3. Keep the livestock away from contaminated flood/cyclone/stagnated waters</p> <p>3. Add water sanitizers</p>	<p>1. Hand over the maintenance of the structures to panchayats</p> <p>2. Sensitize the farming community about importance of clean drinking water</p>
Health and disease Management		
<p>1. Procure and stock emergency medicines and vaccines for important endemic diseases of the area</p> <p>2. All the stock must be immunized for endemic diseases of the area</p> <p>3. Carry out deworming to all young stock</p> <p>4. Keep stock of bleaching powder and lime</p> <p>5. Carry out Butax spray for control of external parasites</p> <p>6. Identify the Clinical staff and trained paravets and indent for their services as per schedules</p> <p>7. Identify the volunteers who can serve in need of emergency</p>	<p>1. Keep close watch on the health of the stock</p> <p>2. Sick animals must be isolated and treated Separately.</p> <p>3. Carry out deworming and spraying to all animals entering into relief camps</p> <p>4. Clean the animal houses regularly and apply disinfectants.</p> <p>5. Safe and hygienic disposal of dead animal carcasses</p> <p>6. Organize with community daily lifting of dung from relief camps</p>	<p>1. keep close surveillance on disease outbreak.</p> <p>2. Undertake the vaccination depending on need</p> <p>3. Keep the animal houses clean and spray disinfectants</p>

2.5.1 Detailed contingency strategies for Livestock,

	Suggested contingency measures		
	Before the event	During the event	After the event

Drought			
<p>Feed and Fodder availability</p>	<p>Establishment of silvi-pastoral system in CPRs with <i>Stylosanthus hamata</i> and <i>Cenchrus ciliaris</i> as grass with <i>Leucaena leucocephala</i> as tree component Top dressing of N in 2-3 split doses @ 20-25 kg N/ha in common property resources (CPRs) like temple lands, panchyat lands or private property resources (PPRs) like waste and degraded lands with the monsoon pattern for higher biomass production</p> <p>Promote cultivation of short duration fodder crops of sorghum/bajra/maize(UP chari, MP chari, HC-136, HD-2, GAIN T BAJRA, L-74, K-677, Ananad/African Tall, Kisan composite, Moti, Manjari, B1-7 and also sunhemp</p> <p>Chopping of fodder should be made as mandatory in every village through supply and establishment of good quality chaff cutters.</p> <p>Establishment of backed yard cultivation of para grass with drain water from bath room/washing area</p> <p>Harvesting and collection of perennial vegetation particularly grasses which grow during monsoon</p> <p>Proper drying, bailing and densification of harvested grass from previous season</p> <p>Creation of permanent fodder, feed and fodder seed banks in all drought prone villages</p>	<p>Harvest and use biomass of dried up crops (Rice, Maize, Bajra, Horse gram, Groundnut, black gram, sun hemp) material as fodder.</p> <p>Harvest the tree fodder (Neem, Subabul, Acasia, Pipal etc) and unconventional feeds resources available and use as fodder for livestock (LS).</p> <p>Available feed and fodder should be cut from CPRs and stall fed in order to reduce the energy requirements of the animals</p> <p>UMMB, hay, concentrates and vitamin & mineral mixture should be transported to the needy areas from the reserves at the district level initially and latter stages from the near by districts. Hay should be enriched with 2% Urea molasses solution or 1% common salt solution and fed to LS</p> <p>Herd should be split and supplementation should be given only to the highly productive and breeding animals</p> <p>Provision of emergency grazing/feeding (Cow-calf camps or other special arrangements to protect high productive & breeding stock)</p> <p>Motivate the farmers to mix the dry fodder with available kitchen waste while feeding</p> <p>Arrangements should be made for mobilization of small ruminants across the villages where no drought exits with subsidized road/rail transportation and temporary shelter provision for the shepherds</p>	<p>Concentrates supplementation should be provided to all the animals.</p> <p>The farmers may be advised to practice “flushing the stock” to recoup</p> <p>Short duration fodder crops of should be sown in unsown and crop failed areas where no further routine crop sowing is not possible</p> <p>Supply of quality seeds of fodder varieties and motivating the farmers to cultivate at least 10% of their land holding for fodder production</p>

		<p>Unproductive livestock should to be culled during severe drought</p> <p>Create transportation and marketing facilities for the culled and unproductive animals</p> <p>Supply silage and or hay on subsidized rates to the farmers having high productive stock</p> <p>Subsidized loans should be provided to the livestock keepers.</p>	
Cyclone	<p>Harvest all the possible wetted grain (rice/maize/bajra etc) and sugar cane tops and use as animal feed.</p> <p>Motivate the farmers to store a minimum quantity of hay (25-50 kg) and concentrates (10-25 kg) per animal in farmer's / LS keepers house/ shed for feeding the animals during cyclone.</p> <p>Stock of anti-diarrheal drugs and electrolytes should be made available for emergency transport</p> <p>Don't allow the animals for grazing in case of early forewarning (EFW) of cyclone</p> <p>Incase of EFW of severe cyclone, shift the animals to safer places.</p>	<p>Treatment of the sick, injured and affected animals through arrangement of mobile emergency veterinary hospitals / rescue animal health workers.</p> <p>Diarrhea out break may happen. Health camps should be organized</p> <p>In severe cases un-tether or let loose the animals</p> <p>Arrange transportation of highly productive animals to safer place</p> <p>Spraying of fly repellants in animal sheds</p>	<p>Repair of animal shed</p> <p>Deworm the animals through mass camps</p> <p>Vaccinate against possible disease out breaks like HS, BQ, FMD and PPR</p> <p>Proper dispose of the dead animals / carcasses by burning / deep burying (4-8 feet) with lime powder (1kg for small ruminants and 5kg for large ruminants) in pit</p> <p>Bleach / chlorinate (0.1%) drinking water or water</p>

			<p>resources</p> <p>Collect drowned crop material, dry it and store for future use</p> <p>Sowing of short duration fodder crops in unsown and water logged areas when crops are damaged and no chance to replant</p> <p>Application of urea (20-25kg/ha) in the inundated areas and CPR's to enhance the bio mass production.</p>
Floods	<p>In case of early forewarning (EFW), harvest all the crops (Maize, Rice, Bajra, Groundnut) that can be useful as fodder in future (store properly) and also sugar cane tops</p> <p>Don't allow the animals for grazing if severe floods are forewarned</p> <p>Motivate the farmers to store a minimum required quantity of hay (25-50kg) and concentrates (25kgs) per animals in farmer / LS keepers house / shed for feeding animals during floods</p> <p>Arrangement for transportation of animals from low lying area to safer places and also for rescue animal</p>	<p>Transportation of animals to elevated areas</p> <p>Stall feeding of animals with stored hay and concentrates</p> <p>Proper hygiene and sanitation of the animal shed</p> <p>In severe floods, un-tether or let loose the animals</p> <p>Emergency outlet establishment for required medicines or feed in each village</p> <p>Spraying of fly repellants in animal sheds</p>	<p>Repair of animal shed</p> <p>Bring back the animals to the shed</p> <p>Cleaning and disinfection of the shed</p> <p>Bleach (0.1%) drinking water / water sources</p> <p>Deworming with</p>

	health workers to get involve in rescue operations		<p>broad spectrum dewormers</p> <p>Vaccination against possible disease out breaks like HS, BQ, FMD and PPR</p> <p>Proper disposable of the dead animals / carcasses by burning / deep burying (4-8 feet) with lime powder (1kg for small ruminants and 5kg for large ruminants) in pit</p> <p>Drying the harvested crop material and proper storage for use as fodder.</p>
--	--	--	---

2.5.3 Fisheries/ Aquaculture:

	Suggested contingency measures		
	Before the event	During the event	After the event
1) Drought			
A. Capture			
Marine	No intervention	No intervention	No intervention

Inland			
(i) Shallow water depth due to insufficient rains/inflow	Stocking of advanced fingerlings in half or even less than the normal stocking density or stocking of common carp seed	Immediate harvesting or decreasing the density commensurate with the water quantity.	De weeding and deepening of tank to ensure retention of water for a longer period and provision of employment under MGNREGP
(ii) Changes in water quality	Regular monitoring of water quality parameters and application of geolites, soil probiotics, etc to maintain water quality	Immediate harvesting or changing the water quality by application of sanitisers.	Removal of top layer, deep ploughing of tank and application of lime
(iii) Any other			
B. Aquaculture			
(i) Shallow water in ponds due to insufficient rains/inflow	Crop holiday or going for stocking of yearlings by reducing the density according to availability of water	Harvesting of fish and leaving the pond fallow till next season	Removal of top layer, deep ploughing of tank and application of lime
(ii) Impact of salt load build up in ponds / change in water quality	Stocking of salinity tolerant fish / shrimp, application of geolites and other buffers	Frequent change of water with fresh water	Frequent draining of the pond with fresh water, removal of top layers
(iii) Any other			
2) Floods			
A. Capture			
Marine	No intervention	No intervention	No intervention
Inland			
(i) Average compensation paid due to loss of human life	Shifting the people from low lying areas to relief camps	Deployment of specially trained persons for rescue operations by providing life bouys, jackets, ropes, boats, etc	Payment sufficient ex-gratia to the families
(ii) No. of boats / nets/damaged	Shifting and relocating boats and nets to safer places when warnings are issued, to avoid fishing, etc	Shifting and relocating boats and nets to safer places	Assessment of damages to boats and nets and provision of boats and nets for restoration of livelihoods

(iii) No.of houses damaged	Avoidance of construction of houses in flood prone ares, construction of pucca houses at elevated places,	Shifting of people by relief boats to the relief camps	Assessment of damages to houses and provision of compensation in case of partial damage and sanction house under existing schemes
(iv) Loss of stock	Avoidance of surface species like catla, silver carp since they are vulnerable in tanks prone to floods, erection of nets across the spill way or just beyond it	Erection of nets at spill ways	Taking up compensatory stocking
(v) Changes in water quality		When dissolved oxygen levels go down, aerators, recirculation of water, etc are to be attempted to maintain DO levels, going for partial harvest, etc	
(vi) Health and diseases	Sometimes there may be heavy accumulation of nutrients and organic matter.	There may be break out of Hemorrhagic septicemia. Addition of antibiotics like Chloro Tetra Cycline or Oxy Tetra Cycline to the feed to control the disease	Removal of weeds, top layer of soil, deep ploughing of tank and application of lime, exposing to sun light
B. Aquaculture			
(i) Inundation with flood water	Raising and rivetting the bunds, construction of spill way to release excess water, erection of nets to avoid escape of fish	Continuous pumping of excess water, erection of nets low lying areas	Strengthening of bunds, excavating channels along the sides of the ponds for free escape of water
(ii) Water continuation and changes in water quality		When dissolved oxygen levels go down, aerators, recirculation of water, etc are to be attempted to maintain DO levels, going for partial harvest, etc	
(iii) Health and diseases	Sometimes there may be heavy accumulation of nutrients and organic	There may be break out of Hemorrhagic septicemia. Addition	Removal of weeds, top layer of soil, deep ploughing of tank and application

	matter.	of antibiotics like Chloro Tetra Cycline or Oxy Tetra Cycline to the feed to control the disease	of lime, exposing to sun light
(iv) Loss of stock and inputs (feed, chemicals etc)	Advance erection of nets, strengthening of bunds where they are prone to breaches, harvesting or reducing the density	Suspension of feeding, application of organic manures	Compensatory stocking, assessment of values and payment of subsidy on inputs
(v) Infrastructure damage (pumps, aerators, huts etc)	Insuring pond, accessories, etc., Shifting of aerators, pumps soon after warnings are issued	Relocating pumps, aerators to elevated places	Assessment of damages and provision of them on subsidy
(vi) Any other			
3. Cyclone / Tsunami			
A. Capture			
Marine			
(i) Average compensation paid due to loss of fishermen lives	Avoidance of fishing, preventing fishermen from venturing into sea, carrying of safety equipment and VHF sets, shifting fishermen from vulnerable areas to relief camps, etc	To ensure the return of fishing boats on long voyages, provision of information on such boats to coast Guard	Payment sufficient ex-gratia to the families
(ii) Avg. no. of boats / nets/damaged	Avoidance of fishing when warnings are issued, shifting of boats and nets to safe places	Shifting and relocating boats and nets to safer places	Assessment of damages to boats and nets and provision of boats and nets for restoration of livelihoods
(iii) Avg. no. of houses damaged	Avoidance of houses in Coastal Regulation Zone, designing of houses to withstand impact of turbulent wind and water	Shifting of people by relief boats to the relief camps	Assessment of damages to houses and provision of compensation in case of partial damage and sanction house under existing schemes
Inland	Erection of protective nets across the surplus weir to prevent fish loss due to overflows	Continuous monitoring to prevent or minimise escape of fish along with surplus water	Compensatory stocking of seed

B. Aquaculture			
(i) Overflow / flooding of ponds	The design of the pond must be in such a manner as to bail out surplus water and to prevent loss of standing crop	Continuous monitoring to prevent or minimise escape of fish along with surplus water	Compensatory stocking of seed
(ii) Changes in water quality (fresh water / brackish water ratio)	Recirculation water to replenish and ensure sufficient dissolved oxygen levels in the pond. Maintenance of salinity levels by pumping in water from creeks.	Continuation of the same process.	Restoration of physical and chemical parameters
(iii) Health and diseases	Removal of stress causing factors to maintain the health of the animal	Removal of stress causing factors to maintain the health of the animal	Restoration of physical and chemical parameters
(iv) Loss of stock and inputs (feed, chemicals etc)	Preventive nets must be erected to minimise loss of stock	Continuation of the same process.	Compensatory stocking of seed
(v) Infrastructure damage (pumps, aerators, shelters/huts etc)	Pumps, aerators, etc must be protected by moving them to safe locations	To avoid use of aerators, pumps and other appliances	Overhauling of the equipment to prevent from being damaged
(vi) Any other			
4. Heat wave and cold wave			
A. Capture			
Marine	Avoidance of fishing	Avoidance of fishing	No intervention
Inland	Monitoring dissolved oxygen levels	Monitoring dissolved oxygen levels	No intervention
B. Aquaculture			
(i) Changes in pond environment (water quality)	Reduction of biomass by partial harvest in the event of heat as the DO levels will be very low.	Avoidance of fishing	Compensatory stocking of seed and restoration of all physical and chemical parameters
(ii) Health and Disease management	Removal of stress causing factors to	Removal of stress causing factors	Compensatory stocking of seed and

	maintain the health of the animal	to maintain the health of the animal	restoration of all physical and chemical parameters
(iii) Any other
